

Industry-Level React Native Project Guide: Student Attendance / Survey App

Project Objective

Build a real-world React Native project to understand complete mobile application flow used in industry projects. This project focuses on frontend concepts first and later supports backend integration.

Why this Project

This project is close to real company applications because it includes authentication, API integration, reusable components, form handling, image upload, local storage, navigation, and error handling.

Project Features

1. Login Screen
2. Home Dashboard with cards
3. Survey/Attendance list using API
4. Form screen
5. Dropdown selection
6. Image upload
7. Navigation between screens
8. Local storage using AsyncStorage
9. Loading state
10. Error handling

Industry Folder Structure

src/

■■■ screens/

■ LoginScreen.jsx

■ HomeScreen.jsx

■ SurveyScreen.jsx

■ ProfileScreen.jsx

■

■■■ components/

■ CustomButton.jsx

■ InputField.jsx

■ Card.jsx

■

■■■ services/

■ api.js

■

■■■ navigation/

■ AppNavigator.jsx

■

■■■ hooks/

■ useAuth.js

■

```
■■■ utils/  
■ constants.js  
■  
■■■ assets/
```

Learning Concepts

- React Native Components
- Navigation
- useState
- useEffect
- API Calls
- FlatList
- Forms
- AsyncStorage
- Image Upload
- Reusable Components

Project Development Plan

Day 1: Setup + Login Screen
Day 2: Navigation + Dashboard
Day 3: API Integration + FlatList
Day 4: Forms + Local Storage
Day 5: Image Upload + Error Handling
Day 6: Profile Screen
Day 7: APK Build

Future Backend Integration

Optional Express APIs:
POST /login
GET /attendance
POST /survey-submit

Final Outcome

After completion, developer will understand complete React Native flow from UI creation to APK generation.
